

## ENERGY POLICY

ŞENSAC Yassı Metal San. ve Tic. A.Ş. Our energy policy defines our organization's energy management and energy efficiency vision. This policy is to determine the top management principles and commitments to be used as the basis and criteria for our relevant activities and actions, analysis and all other evaluations within the scope of Energy Management System (EnYS). This policy, for which top management together with energy management system representatives and employees are responsible, covers all relevant parties and legal regulations.

Our company undertakes its commitment to energy efficiency and sustainability principles while operating in the iron and steel sector. In order to use energy effectively, minimize environmental impacts and work in line with continuous improvement targets, we adopt the following principles:

### PRINCIPLES - Energy Efficiency and Sustainability

- **Energy Efficiency Priority:** As a company, we strive to continuously improve our energy performance with energy management system and reduce energy intensity.
- **Legal Compliance and Standards:** To fully comply with legal requirements regarding energy use and to work to exceed sector standards.
- **Technological Innovation and Improvement:** Increasing energy efficiency by following innovative technologies and developing continuous improvement projects.
- **Employee Training and Awareness:** Organizing continuous training programs to educate our employees on energy efficiency and raise awareness.
- **Sustainable Resource Use:** Using natural resources efficiently, reducing waste and encouraging recycling processes.
- **Innovation and Continuous Improvement:** Continuously reviewing our business processes to find innovative solutions and adopting continuous improvement principles.

## COMMITMENTS

- Efficient use of energy and natural resources in all our activities
- Use of environmentally and energy-friendly technologies in equipment purchases in our new projects
- Saving energy and reducing natural resource consumption by making efficiency-enhancing improvements in our current processes and systems
- Continuous improvement of our energy performance by designing and supplying products, processes and services with high energy efficiency
- Continuous development by providing sufficient resources (knowledge, expertise and economic resources) to achieve our energy-related goals and objectives
- Compliance with legal and other conditions regarding the use and consumption of our energy efficiency
- Increasing the awareness of all our stakeholders on renewable energy and climate change and developing energy efficiency projects that will support the principle of sustainable development and continuous improvement of our energy management system

The top management of our company will consider their duty to provide and continuously improve all kinds of resources related to people, infrastructure and work environment required throughout the company within the framework of existing possibilities in order to realize the commitments defined above.
